

PRODUCT INFORMATION

Fuel System Drier

FOR GASOLINE ENGINES

PART NO. 280

Winter brings special problems when even small quantities of water are present in a vehicle gasoline tank. Being heavier than gasoline, water will settle in bends of the fuel line or in the fuel filter. Temperatures below the freezing temperature of water will cause blockage and prevent engine operation. Additionally, moisture in the fuel will corrode and damage fuel system components.

BG Fuel System Drier is a special blend of ingredients which will quickly and effectively remove moisture from the fuel system and which will prevent frozen fuel lines. Anti-corrosion agents in BG Fuel System Drier will prevent rust and corrosion in the system.

DIRECTIONS FOR USE:

To prevent freezing and to remove moisture from the fuel system, add one bottle of BG Fuel System Drier to fuel tank per 10 to 20 gallons of gasoline. To thaw frozen gas lines add 2 bottles per ten gallons of gasoline, rock vehicle vigorously.

WARNING: FLAMMABLE. CONTAINS ISOPROPYL ALCOHOL. Do not use near heat or flame. Avoid contact with eyes. In case of eye contact, flush thoroughly with water. If irritation persists, get medical attention. KEEP OUT OF REACH OF CHILDREN.
