# DUST SUPPRESSANT

CORN ENHANCED LIGNIN

June 2009

**Corn Enhanced Lignin** is a cost effective dust suppressant and soil stabilizer that can be used in a variety of application methods to create a more durable surface with load bearing capacity.

- Biodegradable
- Non Toxic
- Environmentally Safe
- Derived from Natural Ingredients

**Initial Application Rate: 1 Liter per 4 sq/ft.**

**Re-application: (after 1 month) ½ Liter per 4 sq./ft.**

### Product Application

**For Best results, surface should be watered, but well drained, and well graded, crowned and compacted.** Moisture content and precipitation during and immediately after application may affect results.

- Scarify or pulverize surface to 1 – 2 inch depth
- Water as needed and apply product
- For best results roll the surface to compact

### Typical Properties

Appearance	Brown
Specific Gravity	-1.14
pH	5.5 – 7.5
Water Miscability	Complete

The typical properties shown above are representative of current production. Some are controlled by manufacturing and performance specifications while others are not. All may vary within modest ranges.
