

PRODUCT INFORMATION

Chrome And Glass Cleaner

Description

Chrome and Glass Cleaner is a truly unique product. It has very unusual properties that are not found in other chrome and glass cleaners. Most glass cleaners contain detergents or emulsifiers that hold various parts of the formula in suspension or are needed to clean greasy films from glass. They also may contain perfumes to make them smell nice. The drawback to both emulsifiers and perfumes is they both tend to streak the glass. *Chrome and Glass Cleaner* contains no emulsifiers or perfumes and will not streak. The surface will clean fast and leave not streaks to dull the shine.

Chrome and Glass Cleaner also contains "liquid glass" that will leave the surface very smooth, which has the effect of enhancing shine and reducing the amount of dirt that will cling to the surface. This means cleaning much less often.

The ability of *Chrome and Glass Cleaner* to remove smoke, oil, paint overspray, and other stains off almost any hard surface is incredible. It contains a rouge that is used as a fine jewelry polishing compound and really shines metal, glass, chrome, and smooth tile surfaces.

Uses

Use on motorcycles, show cars and any other application where sparkling chrome is desired. It will remove all types of grime, oil, tar and other soils from exhaust systems. Used with 0000 steel wool, it will remove rust stains from chrome and seal the surface to retard further rusting. It can clean the baked on tar and smoke film from fireplace doors, and clean brass, silver and stainless steel, leaving them smooth and fingerprint resistant. When used on the windshield of cement trucks, the cement can be flicked off easily because it is not allowed to bond to the glass. Use *Chrome and Glass Cleaner* on glass, chrome, brass, stainless steel, smooth tile, Formica, and aluminum to get the best shine available. It's perfect for cleaning up show cars and all that chrome. Try it!

Packaging

Chrome and Glass Cleaner comes in a case of 12/ 1 quart plastic bottles, with a convenient flip up spout for easy application.

Do not use this product on most painted surfaces or soft surfaces such as plastic or fiberglass!
